

## HDL-direct FL

HD F080 CH	4 x 20 ml
HD F245 CH	12 x 20 ml
HD F400 CH	4 x 100 ml

### INTENDED USE

Reagent for quantitative *in vitro* determination of HDL-cholesterol in biological fluids.

### SUMMARY OF TEST

Blood total cholesterol levels have long been known to be related to coronary heart disease (CHD). In recent years, in addition to total cholesterol, high density lipoprotein cholesterol (HDL-C) has become an important tool used to assess an individual risk of developing CHD since a strong negative relationship between HDL-C concentration and the incidence of CHD was reported. Thus, there has been substantial interest in HDL-C analysis.

### PRINCIPLE OF THE METHOD

Anti human  $\beta$ -lipoprotein antibody in reagent R1 binds to lipoproteins (LDL, VLDL, and chylomicrons) other than HDL. The antigen-antibody complexes formed block enzyme reactions when reagent R2 is added. Cholesterol esterase and cholesterol oxidase in reagent R2 react only with HDL-C. Hydrogen peroxide produced by the enzyme reactions with HDL-C yields a blue color complex upon oxidative condensation of F-DAOS [N-ethyl-N-(2-hydroxy-3-sulfo-propyl)-3,5-dimethoxy-4-fluoroaniline, sodium salt] and 4-aminoantipyrine in the presence of peroxidase. By measuring the absorbance of the blue color complex produced, at the optimum wavelength of 593 nm, the HDL-C concentration in the sample can be calculated when compared with the absorbance of the HDL-C Calibrator.

### KIT COMPONENTS

**For *in vitro* diagnostic use only.**

The components of the kit are stable until expiration date on the label.

Keep away from direct light sources.

<b>HDL-C R1</b>	<b>F080</b>	<b>3 x 20 ml (liquid) blue cap</b>
	<b>F245</b>	<b>9 x 20 ml (liquid) blue cap</b>
	<b>F400</b>	<b>3 x 100 ml (liquid) blue cap</b>

Composition: Good's buffer pH 7.0 30 mmol/l, 4-aminoantipyrine 0.9 mmol/l, POD 2400 U/l, ascorbate oxidase 2700 U/l, and anti human-lipoprotein antibody, blend of 5-chloro-2-methyl-2-H-isothiazol-3-one [EC No 247-500-7] and 2-methyl-2-H-isothiazol-3-one [EC No 220-239-6] (3:1) in concentration 0.0015-0.06%.

<b>HDL-C R2</b>	<b>F080</b>	<b>1 x 20 ml (liquid) red cap</b>
	<b>F245</b>	<b>3 x 20 ml (liquid) red cap</b>
	<b>F400</b>	<b>1 x 100 ml (liquid) red cap</b>

Composition: Good's buffer pH 7.0 30 mmol/l, cholesterol esterase 4000 U/l, cholesterol oxidase 20000 U/l, and F-DAOS 0.8 mmol/l.

Store all components at 2-8°C.

### MATERIAL REQUIRED BUT NOT SUPPLIED

Current laboratory instrumentation. Spectrophotometer UV/VIS with thermostatic cuvette holder. Automatic micropipettes. Glass or high quality polystyrene cuvettes. Saline solution.

### REAGENT PREPARATION

Use separate reagents ready to use.

Stability: up to expiration date on labels at 2-8°C.

Stability since first opening of vials: 60 days at 2-8°C.

### PRECAUTIONS

**HDL-C R1: Warning.** May cause an allergic skin reaction (H317). Avoid breathing vapours (P261). IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water (P303+P361+P353). If skin irritation or rash occurs: Get medical advice (P333+P313).

**HDL-C R2:** It is not classified as hazardous.

### SPECIMEN

Use serum as a specimen. It is recommended to measure HDL-C immediately after collection. Ascorbic acid, bilirubin, and hemoglobin do not have a significant effect on the measurement.

### TEST PROCEDURE

Wavelength:	600 nm
Lighthpath:	1 cm
Temperature:	37°C
dispense in cuvette reagent R1:	360 $\mu$ l
add sample:	4 $\mu$ l
mix, incubate at 37°C for 5 minutes.	
dispense in cuvette reagent R2:	120 $\mu$ l
mix, incubate 5 minutes at 37°C. Read absorbances of calibrator (As) and samples (Ax) against reagent blank.	

### RESULTS CALCULATION

serum/plasma sample:

HDL-C mg/dl = Ax/As x calibrator value

### EXPECTED VALUES

Adult male:	35.3 - 79.5 mg/dl
Adult female:	42.0 - 88.0 mg/dl

Each laboratory should establish appropriate reference intervals related to its population.

### QUALITY CONTROL AND CALIBRATION

It is suggested to perform an internal quality control. For this purpose the following human based control sera are available:

#### QUANTINORM CHEMA

with normal or close to normal control values

#### QUANTIPATH CHEMA

with pathological control values.

If required, a multiparametric, human based calibrator is available:

#### AUTOCAL H

Please contact Customer Care for further information.

### TEST PERFORMANCE

#### Linearity

the method is linear up to 220 mg/dl.

If the limit is exceeded, it is suggested to dilute sample 1+9 with saline and to repeat the test, multiplying the result by 10.

#### Sensitivity/limit of detection (LOD)

the limit of detection is 1 mg/dl.

#### Interferences

no interference was observed by the presence of:

hemoglobin	$\leq$ 500 mg/dl
bilirubin (free)	$\leq$ 50 mg/dl
bilirubin(conjugated)	$\leq$ 40 mg/dl
ascorbic acid	$\leq$ 50 mg/dl

#### Precision

intra assay (n=10)	mean (mg/dl)	SD (mg/dl)	CV%
sample 1	32.1	0.18	0.55
sample 2	88.9	0.61	0.68

#### Comparison

a comparison between HDL-direct FL and other methods has shown the following results:

$$\begin{aligned} \text{HDL-C Chema} &= x \\ \text{HDL-C competitor} &= y \\ n &= 50 \end{aligned}$$

$$y = 0.96x + 2.5 \text{ mg/dl} \quad r^2 = 0.998$$

### WASTE DISPOSAL

This product is made to be used in professional laboratories.

P501: Dispose of contents according to national/international regulations.
